

ALL-TIME HIGH (ATH) TRACKER

Standard Operating Procedure & Trading Manual

1. OBJECTIVE & PHILOSOPHY

Is tracker ka mukhya uddeshya un stocks ko scan karna aur identify karna hai jo apne Previous All-Time High (ATH) level ke kareeb hain. Logic yeh hai ki jab koi stock apna previous ATH break karta hai, toh resistance na hone ki wajah se stock me upward momentum ki probability kafi high hoti hai.

2. SYSTEM FEATURES & METRICS

Feature	Description
0% to 10% Zone Scan	System sirf unhi stocks ko filter karke list karta hai jo apne Previous ATH se 0 se 10 percent ki range me trade kar rahe hain.
Distance from ATH	Tracker me clearly mention hota hai ki stock apne previous ATH level se exact kitne percent niche hai, jisse breakout ki proximity pata chalti hai.
Daily Performance	Previous day close ke mukable stock ka current day percentage up/down movement live display hota hai.
Chart & Data Links	Har stock ke sath chart aur detailed data ka direct access link diya gaya hai, taaki manual search ki zaroorat na pade.
Telegram Alerts	Jab list ka koi bhi stock effectively apna ATH cross karta hai, toh system automatically Telegram par real-time alert push karta hai.

3. RISK & REWARD PARAMETERS

Risk Control (Stop Loss)	Target (Reward)
Strictly 5% fixed Stop Loss . Entry level se 5% niche stop loss lagana mandatory hai.	Target reward 15% se 20% ke beech rakha jata hai (Risk to Reward Ratio 1:3 ya 1:4).

4. EXECUTION PROCESS (STEP-BY-STEP GUIDE)

1. **Screening:** Tracker link access karein aur 0-10% zone me aane wale stocks ki scanned list ko review karein.
2. **Analysis:** 'Distance from ATH' column check karein aur link par click karke stock ka chart verify karein.
3. **Order Setup (The 1% Buffer Rule):** Telegram alerts ke liye channel se jude rahein. Execution ke liye apne Demat account me stock ke Previous ATH level se **1% upar** ka ek GTT (Good Till Triggered) Buy Order place karein.
4. **Trade Management:** GTT trigger hone ke turant baad system me 5% ka Stop Loss order place karein aur 15% - 20% profit target ka wait karein.

CRITICAL RULE (1% Buffer): Entry hamesha Previous ATH se 1% upar (GTT ke through) hi leni hai. Stock kai baar exact ATH ko touch karke reverse ho jata hai. Yeh 1% buffer false breakouts se bachne ke liye strictly follow karna hai.
